## Families and Households:

The composition of the **15,210** families who reside in the study area is shown in the table below. Families are groups of related people who live together, whereas households refer to the person or group of people living in any one housing unit. Generally, households that do not contain a family are made up of unrelated people living together (eg, roommates) or people living alone. While it is possible for two families to share a household, the difference between the number of households and the number of families in an area shows, approximately, the number of non-family households in a place.

| 2015-2019 Family Composition | Number of Families | Percent of Families |
|---|---|---|
| **City (Mount Prospect)** | | |
| Families | 15,210 | -- |
| Married with Children | 5,577 | 36.67% |

## Endnotes:

Calculations presented here were performed by staff at PolicyMap and are based on public and proprietary data sources.

Depending on the type of size of the area selected for this report, the above values capture data for the block groups, tracts, counties, etc, in which at least 50% of their areas are contained. If this report is run for a zip code, some data will be unavailable, as zip code values for some topics are not available.

For custom areas, such as radii, custom regions, school districts, and political districts, Census ACS data was calculated by summing the following component City in 2000: **Mount Prospect**, and the following component City in 2015-2019: **Mount Prospect**.

Any change calculations included in this report reflect PolicyMap's translation of boundary changes from 2000 to 2010. Therefore, they may not match a calculation done using the 2000 and 2015-2019 values shown in the report.

Estimates of tenure, incomes, and housing stock are provided by the ACS for 2015-2019. Data on legal permanent residents is from the Department of Homeland Security, and, for all areas, describes the state in which that area is located. For more information on demographic data in PolicyMap, see the related entry for Census: Decennial Census and ACS and for more information on immigration data in PolicyMap, see the entry for the Department of Homeland Security Immigration Yearbook in our Data Dictionary.

Postal vacancy data in this report is from a resident and business list compiled by Valassis Lists. This data shows a point-in-time snapshot of vacant addresses. For more information on Valassis Lists vacancy data, see our Data Dictionary.

The source of crime data in the tables presented here is Federal Bureau of Investigation's Uniform Crime Reporting (UCR) Program, which compiles standardized incident reports from local law enforcement agencies in order to produce reliable, uniform, and national crime data. The UCR Program collects data on known offenses and persons arrested by law enforcement agencies. For details on this dataset, see the related entry for FBI Uniform Crime Reports in the Data Dictionary. Crime data in this report is not summed or aggregated, but rather listed for each of the complete areas within the study area for which crime is reported.

For the separate Employment and Crime Sections in this report, only locations for which data are available are included in the tables. If the section does not include information, no data was available for any of the locations or component parts of the area you requested for this report.

PolicyMap's Terms of Use apply to the creation and use of this report.

# Estimated number of people per square mile, between 2015-2019.

Estimated number of people per square mile, between 2015-2019. The population density was determined by taking the count of people and dividing it by the square mileage of the area.

# Estimated median value of an owner-occupied home, between 2015-2019.

Estimated median value of an owner-occupied housing unit, between 2015-2019. The value is based on survey respondents' estimates of how much their properties and lots would sell for if they were for sale. Medians were suppressed in cases where the sample of the average was less than 10 of the unit that is being described (e.g., households, people, householders, etc.). ACS employs values to indicate top and bottom ranges of values. A value of 1,000,001 indicates a value of 1,000,000 or greater, whereas a value of 9,999 indicates a value of 10,000 or less.
